A Candidate-screening funnel

Prediction and evidence prioritization; no experimental efficacy claim

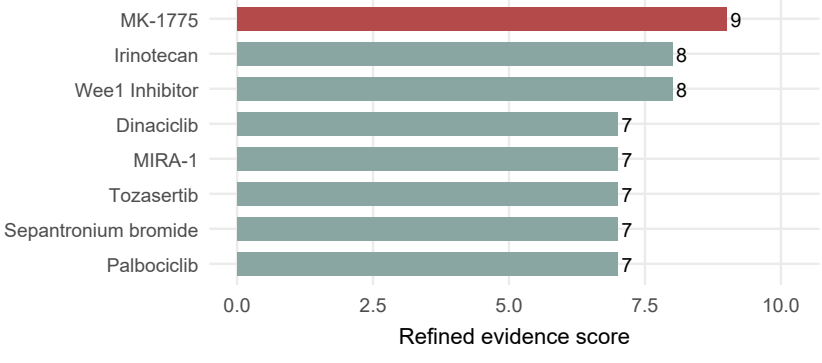

B Eight shortlisted drug predictions

C2-C1 predicted response; negative = predicted C2 sensitivity

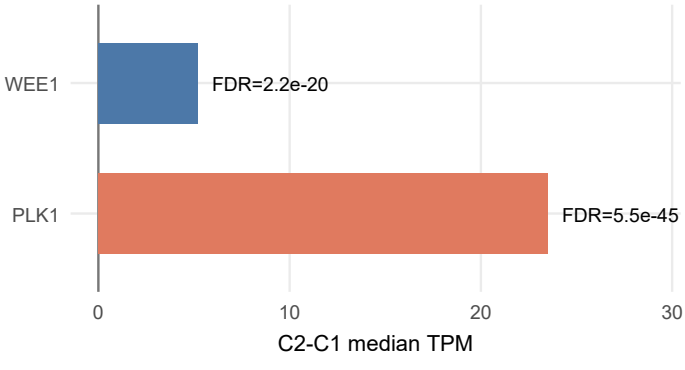

C Integrated evidence priority

Expression, PPI, structure, CRC evidence, and drug-effect scoring

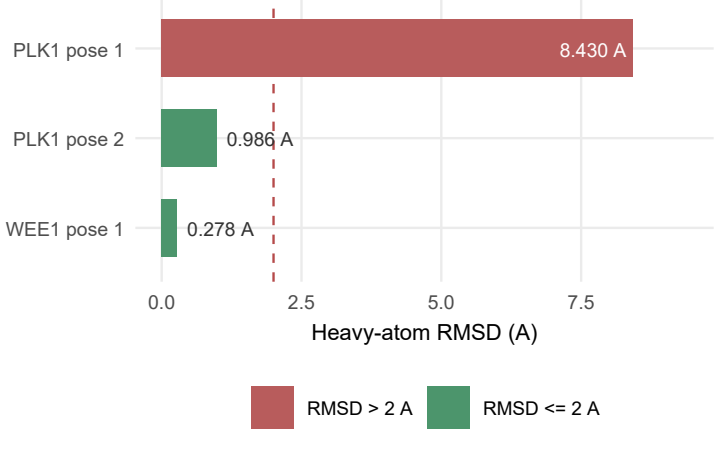

D Target expression in C2 versus C1

TCGA TPM difference; both targets detected in all samples

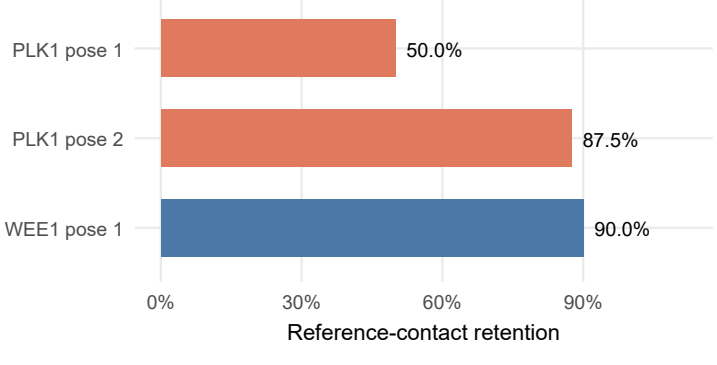

E Co-crystal redocking

Dashed line: prespecified 2-A heavy-atom RMSD threshold

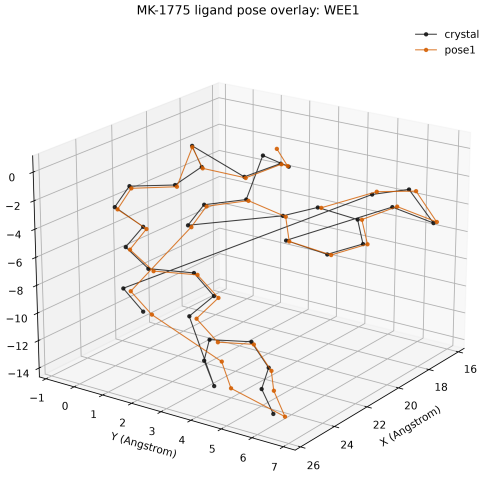

F Crystal-contact retention

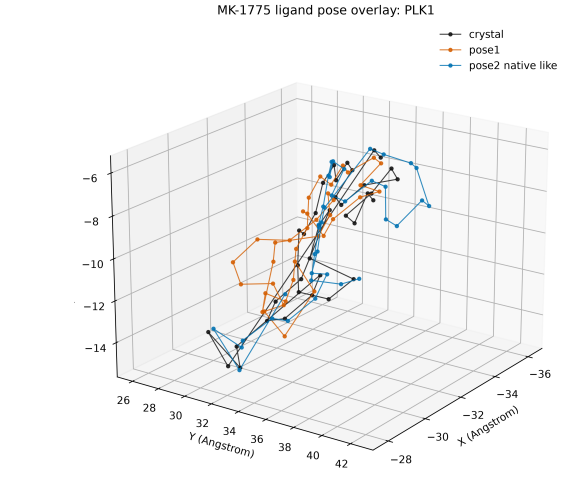

All typed PLIP contacts retained in selected redocked poses

G WEE1: crystal versus redocked pose

H PLK1: ranking limitation and native-like pose

Exploratory computational evidence only. Predictions and redocking do not establish clinical efficacy, dual-target pharmacology, or causal vulnerability. No unfinished MD result is included.
